

---

You always hear about the dangers of hackers and digital attacks, but how can you protect yourself? You might not know it, but taking certain precautions and using good cybersecurity habits can stop a hacker in his or her tracks. This blog post will teach you what to look for in a VPN service, four ways to keep your private data safe from prying eyes, and more! 1. Browse with Tor 2. Update Your Software 3. Install Analytics Tools such as Ghostery or Adblock Plus 4. Encrypt Your Computer 5. Beware of Unsecure Wi-Fi 6. Use a VPN 7. Ensure that the Privacy Policies of the Services You Use Are Privacy-Driven 8. Consider Moving to a Privacy-Driven Location or Using a VPN When You Browse Online 9. Be Smart with Social Media

Guard your identity, personal data and online activity from hackers, government agencies and big corporations for FREE! The best VPN provider on the market to unblock your favorite sites from anywhere in the world without being tracked or monitored! 1.Free OpenVPN Server list <https://yunoshosting3288128.wordpress.com/2016/01/27/free-openvpn-server-list/> 2.AES 256 bit <https://yunoshosting3288128.wordpress.com/2015/12/24/aes-256-bit-encryption-why-isnt-this-used-on-all-services> 3.Learn How to Setup an OpenVPN Server on Linux Centos 7 <https://yunoshosting3288128.wordpress.com/?s=openvpn+server>
